

SSE GREEN EV

100% RENEWABLE ELECTRICITY FOR YOUR EVs

Save money and cut your emissions by charging your electric vehicles (EV) with zero-carbon electricity from our UK wind farms and hydro plants.¹

If you run EVs or are thinking of electrifying your fleet of vehicles, SSE Green EV can help you cut your costs and carbon footprint.

Designed to make the most of your smart or AMR meter, SSE Green EV allows you to charge your EVs for less in off-peak hours that suit your business. Don't have a smart or AMR meter? We can install one for you at no additional cost.²

All our green electricity is 100% certified renewable and independently verified by EcoAct, so it's easy to report zero emissions for electricity. And with SSE Clarity, our online energy management tool, you can spot further ways to reduce your costs and emissions.

HOW SSE GREEN EV HELPS YOU

- **Go green** – 100% renewable electricity from SSE's own UK wind farms and hydro plants.¹
- **Save money** – charge your EVs for less with off-peak electricity during the night, evenings or weekends (subject to availability).²
- **Report zero emissions** – backed by Renewable Energy Guarantees of Origin (REGOs) and independently verified by EcoAct, an Atos company.
- **Optimise energy usage** – spot savings with SSE Clarity, your online energy management platform.
- **Fix your prices** – fixed terms from six months to four years to suit your budget.

¹ All our fixed-price energy plans include 100% renewable electricity as standard. All our renewable electricity is sourced from wind and hydro assets wholly or partly owned by SSE Renewables, our sister company in the SSE Group. With SSE Green EV, you'll continue to get your electricity through the national grid as normal, and we'll match your consumption to REGOs from the SSE Group's generating assets. ² If you don't already have a smart or AMR meter and don't have one installed at no additional cost, the price you pay could increase.

Transport accounts for around 23% of global energy-related CO₂ emissions. As businesses own over half of all registered vehicles, it's crucial that companies lead the shift to electric.³

Designed to help you cut costs and carbon, SSE Green EV is ideal for charging your fleet of vehicles at off-peak times during the night, evenings or weekends (depending on your meter), when energy prices are lower. From company cars to taxis, delivery vans and buses, charge your EV fleet for less with zero-emissions electricity.

TWO FIXED-TERM PRICING OPTIONS

SSE Protect

With SSE Protect, your wholesale energy prices and standing charges are fixed for your whole contract period.⁴

SSE Choice

With SSE Choice, your wholesale energy prices are fixed for your whole contract period but non-commodity costs may vary.⁵

WHO IS THIS PRODUCT SUITABLE FOR?

- Owners of EV fleets
- Bus and freight companies going electric
- Organisations running electric company vehicles.

Power your fleet with our UK-generated 100% green electricity to cut your costs and carbon footprint.¹
