

SSE GREEN GAS

HELPING YOUR BUSINESS GO GREEN, WHATEVER YOUR BUDGET

Green energy is a great way to showcase your environmental credentials, but it shouldn't cost you the earth.

Our choice of SSE Green Gas products makes going green more affordable, whatever the size of your business.

WHY CHOOSE SSE GREEN GAS PRODUCTS?

- Helps you to reduce carbon and hit your emissions targets
- Demonstrate your commitment to renewable and sustainable goals
- Enhance your reputation with customers and stakeholders
- Differentiate your business from your competitors
- Get peace of mind from using a trusted energy supplier

GREEN MEANS BUSINESS

At SSE Energy Solutions, we know how important it is for your business to show your commitment to sustainable values – to attract customers, employees and partners. And we're committed to helping businesses of all sizes cut carbon on the road to net zero.

One way to make your business stand out and reduce carbon is to switch to renewable gas.

What's renewable gas?

Renewable gas is produced from sources like agricultural materials, food waste and wastewater. So it's 100% renewable and results in lower greenhouse gas emissions than natural gas.

How do you know it's really renewable? Because every unit of renewable gas we buy is backed by Renewable Gas Guarantees of Origin (RGGOs) or Biomethane Certificates (BMCs) – 100% certified renewable gas.

Why SSE Green Gas?

As increasing demand for renewable gas currently outstrips supply, we recognise that buying 100% renewable gas may not suit all business budgets.

That's why we offer a choice of products – so your business can show your green credentials and make a difference, whatever your energy budget.

- **SSE Green Gas is 25% renewable gas and 75% carbon-neutral gas backed by carbon offsets, which is more affordable.**
- **SSE Green Gas Plus is just 100% renewable gas, a great option for more ambitious green targets.**

What's carbon offsetting?

Carbon offsetting is a way to compensate for your emissions by funding an equivalent carbon dioxide (CO₂) saving elsewhere. By helping to pay to reduce CO₂ in other parts of the world, you balance out, or offset, the CO₂ your business is calculated to produce from the natural gas you buy – that means your gas is carbon-neutral.

The 75% carbon-neutral gas you get with SSE Green Gas is offset by projects to develop wind and hydro power generation abroad, which cut global CO₂ emissions. Organised by Carbon Footprint Ltd, a leading carbon offsetting company, all the carbon offsets we buy are independently verified to international standards.

For more information, see carbonfootprint.com/carbonoffset.html

Why plant trees?

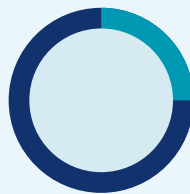

Planting trees is a great way to absorb CO₂ from the atmosphere. So to further reduce carbon at home, we also pledge to plant one tree per SSE Green Gas customer in the UK – native species that help to preserve our environment and biodiversity.

The carbon offset projects we support and tree planting complement renewable gas as an effective step towards a net zero world.

SSE GREEN GAS

SSE Green Gas, our more cost-effective option, is 25% certified renewable gas.

You'll continue to get your gas through the national grid as normal, and we'll match 25% of your consumption to an RGGO or BMC. The remaining 75% is backed by carbon offset projects abroad, plus tree planting in the UK.

■ Carbon-neutral gas (75%)
■ Renewable gas (25%)

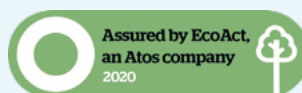

SSE GREEN GAS PLUS

SSE Green Gas Plus, our premium product, is 100% certified renewable gas.

You'll continue to get your gas through the national grid as normal, and we'll match all your gas consumption to an RGGO or BMC, with additional verification from EcoAct, an Atos company.

■ Renewable gas (100%)

WANT TO GO EVEN GREENER?

Combine your SSE Green Gas product with SSE Green Electricity

For a better world of energy

WHICH PRODUCT IS RIGHT FOR MY BUSINESS?

Whichever you choose, our SSE Green Gas products help you cut carbon and make your business stand out.

If you want to show your green credentials on a limited budget, then SSE Green Gas may be for you. With 25% certified renewable gas and 75% carbon-neutral gas, plus tree planting, it's the most affordable way to take the next step on your green journey.

If your business has greater sustainability targets, then SSE Green Gas Plus could work better: simply 100% certified renewable gas.

You'll get a specially designed SSE Green Gas or SSE Green Gas Plus certificate and logo to display your commitment to the environment – investing in a better world of energy.
